

default-reminder

REMINDER – the following names work that was scheduled or requested earlier, is CRITICAL, and whose CURRENT STATUS IS UNCERTAIN; the operator is re-surfacing it. Do NOT assume it is done or not done (\$. . . no-guessing – a false 'already done' is a \$. . . PASS-bluff, a false 'not started' wastes effort). FIRST verify the ACTUAL current status from captured evidence: git log/state, the task list, running and queued background work (incl. the \$. . . BACKGROUND durable queue docs/requests/background_queue.md), test artifacts, the workable-items DB + docs, the recording corpus. THEN act on the delta: if genuinely complete AND evidence-verified, report the captured proof; if partially done, resume from the exact point; if not started or blocked, action it NOW with high priority – or surface the block per \$. . . /\$. . . while keeping every non-blocked part progressing per \$. . . /\$ Treat as high priority.
