Live Board Snapshot — clickup_sync mirror target

Field	Value
Revision	1
Last modified	2026-06-09T00:00:00Z
Captured	2026-06-09, read-only GET probes (HTTP 200)
Target	List 901818394542 ("List") in Folder 901814301358 ("ATMOSphere System"), Space 901811154372 ("ATMOSphere OS"), Team 90182716341 ("FinTech Labs")

This is the LIVE state of the ClickUp side we must mirror. It is a **clean slate** — no tasks, no custom fields, no tags yet. clickup_sync seeds/maps against this.

Status set (the board columns)

- List `override_statuses = False` → the List **inherits the Space status set**. Changing statuses = change the Space (or set `override_statuses=true` on the List first). See [API_REFERENCE.md §e](#).
- Identical on List and Space this run:

orderindex (column L→R)	status name	type	color
0	to do	open	#87909e
1	in progress	custom	#5f55ee
2	complete	closed	#008844

- type semantics: exactly one open (start), zero-or-more custom (middle), exactly one closed/done (terminal). Our SQLite status vocabulary (§11.4.15) MUST map onto these three (or onto an

expanded ClickUp set if the operator adds columns). **Mapping is ClickUp-status-name → our-status; ClickUp is the source-of-truth for the SET.**

- There is **no Deleted column** — ClickUp deletion = trash (webhook taskDeleted), NOT a status. Map our Deleted/Obsolete to a ClickUp **delete**, not a status (API_REFERENCE.md §k).

Custom fields

- GET /api/v2/list/901818394542/field → **0 fields**. Clean slate.
- The sync-marker field (RISK_ANALYSIS.md §echo-detection) does NOT exist yet → operator seeds it once (UI; no public create endpoint confirmed) OR we use Tags.

Tags

- GET /api/v2/space/901811154372/tag → **0 tags**. Space tags feature enabled=True.
- "version tags a task may have several of" → use native Tags (API_REFERENCE.md §g). None exist yet → we create them on first use via POST /task/{id}/tag/{tag_name} (which auto-creates the space tag) UNCONFIRMED: exact auto-create behavior — verify in Phase 1.

Custom task types

- Space features.custom_items.enabled = False → only the default Task type (custom_item_id = 0). Do NOT depend on custom item types (API_REFERENCE.md §f).

Space features (relevant flags)

- multiple_assignees = True — tasks may have several assignees.
- tags.enabled = True.
- custom_items.enabled = False.

Tasks

- task_count = 0 on the folder and the list — **no tasks exist**. First sync is a pure create-from-our-side OR import-from-empty. Because the list is empty, the date_updated ms-string format and the per-task creator/assignees shapes were NOT re-derived live (flagged UNCONFIRMED: in API_REFERENCE.md §h, §i — re-derive from the first real task in Phase 1).
