

# RESOLVED\_IDS

## Resolved ClickUp IDs — clickup\_sync target

| Field         | Value                                                                                                                                   |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Revision      | 1                                                                                                                                       |
| Last modified | 2026-06-09T00:00:00Z                                                                                                                    |
| Secret?       | NO — these IDs are not credentials and may be committed (§ task brief). The pk_... API key is the only secret and is NOT recorded here. |

## Source URLs (operator-provided, from .env)

CLICKUP\_FOLDER = https://app.clickup.com/90182716341/v/f/  
901814301358/901811154372  
CLICKUP\_BOARD = https://app.clickup.com/90182716341/v/b/  
5-901814301358-2

URL grammar: app.clickup.com/<workspaceId>/v/<viewType>/<id1>/  
<id2>

- v/f/... = **folder view**; v/b/... = **board view**.
- In v/f/<A>/<B>, **A = folder id, B = the space the folder lives in** (NOT a list — see proof).
- In v/b/5-<A>-2, the embedded <A> = the same folder id; 5-...-2 is the board-view slug.

## Confirmed IDs (read-only GET probes, 2026-06-09)

| Entity | ID          | Name | Proof (HTTP) |
|--------|-------------|------|--------------|
|        | 90182716341 |      |              |

| Entity                    | ID                       | Name                        | Proof (HTTP)                                                                   |
|---------------------------|--------------------------|-----------------------------|--------------------------------------------------------------------------------|
| <b>Work-space / Team</b>  |                          | <b>FinTech Labs</b>         | GET /api/v2/team → 200, team present                                           |
| <b>Space</b>              | 901811154372             | <b>ATMO-Sphere OS</b>       | embedded in GET /folder/901814301358 → space.id; GET /space/901811154372 → 200 |
| <b>Folder</b>             | 901814301358             | <b>ATMO-Sphere System</b>   | GET /api/v2/folder/901814301358 → <b>200</b>                                   |
| <b>List (sync target)</b> | 901818394542             | <b>List</b>                 | embedded in folder JSON; GET /api/v2/list/901818394542 → <b>200</b>            |
| <b>Board view</b>         | slug<br>5-901814301358-2 | (board view of folder/list) | view of the folder's tasks, columns = List statuses                            |

## Disambiguation proof (why B is the Space, not a List)

- GET /folder/901814301358 → **200**, JSON name="ATMOSphere System", embedded space = { id: 901811154372, name: "ATMOSphere OS" }, and lists = [ { id: 901818394542, name: "List", task\_count: 0 } ].
- GET /list/901811154372 → **HTTP 401** {"err":"Team(s) not authorized","ECODE":"0AUTH\_023"} — i.e. 901811154372 is **not a list** the key can read as a list (it is a Space id; the list endpoint rejects a space id with an auth-style error, not 404). Confirmed it IS the space via GET /space/901811154372 → 200.
- GET /list/901818394542 → **200** — the real list.

NOTE on the 401: ClickUp returns 0AUTH\_023 Team(s) not authorized when the id resolves to an object of the wrong type / outside the token's authorized scope, rather than a clean 404. Do NOT interpret this single 401 as "key invalid" — the same key returned 200 on the folder, list, space, team, fields and tags calls in the same run.

## Workspace members (id → name, for assignee/creator resolution — §11.4.104 attribution)

GET /api/v2/team → team 90182716341 "FinTech Labs", multiple\_assignees=True.

| <b>user id</b> | <b>username</b>                                              | <b>email</b>                                                                     | <b>role</b> |

- role: observed values 1 and 3. UNCONFIRMED: exact numeric→name map (general ClickUp convention: 1=owner, 2=admin, 3=member, 4=guest). 302413976 (role 1) = workspace owner.
- [m.vasic@fmd-mir.com](mailto:m.vasic@fmd-mir.com) (id 113541731) is the operator's likely member identity (matches the project operator) — relevant to §11.4.104 "never tag the operator" rule. UNCONFIRMED: until operator confirms which member is them.
