Cadence + automation

Per §11.4.80, every consuming project MUST run `codegraph_update.sh` at least weekly and `codegraph_sync.sh` after every update + on every meaningful source-change cadence (varies by project). Cadence floor: weekly. Cadence ceiling: per-CI-run.

The scripts append entries below automatically; manual entries are also acceptable when an operator runs the commands directly.

2026-05-21T05:38:53Z — codegraph update FAILED (§11.4 bluff caught)

- before: `0.6.8`
- target: `0.8.0`
- after: `unknown` (mismatch — npm exit 0 was bluffing)

2026-05-21T05:40:01Z — codegraph rolled back to 0.6.8 (Node-25 incompatibility)

- before: `0.8.0` (installed but non-functional on Node 25.x — engine range + V8 WASM JIT bug)
- after: `0.6.8` (last known-working on Node 25.x)
- decision: pin codegraph to 0.6.8 until Node 25 V8 issue is resolved upstream OR operator installs Node 22 LTS alongside
- §11.4 trail: `codegraph_update.sh` correctly caught the failed upgrade via the post-update version check — script working as designed
- follow-up HRD: ENV-CODEGRAPH-NODE25 to track when 0.7+/0.8+ becomes safe again
