

# CodeGraph – Status Summary

---

| Field          | Value                                                                                                                                                                                                                                           |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Revision       | 1                                                                                                                                                                                                                                               |
| Created        | 2026-05-21                                                                                                                                                                                                                                      |
| Last modified  | 2026-05-21                                                                                                                                                                                                                                      |
| Status         | active                                                                                                                                                                                                                                          |
| Status summary | Operator-readable digest derived from <code>Status.md</code> per §11.4.53. Tracks the most-recent codegraph npm version, the date of the last update + sync run, and the running PASS/FAIL totals across all consuming projects' validate runs. |
| Issues         | none                                                                                                                                                                                                                                            |
| Issues summary | —                                                                                                                                                                                                                                               |
| Fixed          | (n/a — derived doc)                                                                                                                                                                                                                             |
| Continuation   | regenerated by <code>cheraId docs sync</code> per §11.4.12 + §11.4.53 (when that command lands per HRD-037). Until then, manually-curated.                                                                                                      |

# Current state

| Metric                           | Value                                                  | Source           |
|----------------------------------|--------------------------------------------------------|------------------|
| codegraph package                | @colbymchenry/codegraph                                | npm              |
| Last-observed in-stalled version | (populated on first code-graph_update.sh run)          | Status.md ledger |
| Last update timestamp (UTC)      | (populated on first run)                               | Status.md ledger |
| Last sync timestamp (UTC)        | (populated on first run)                               | Status.md ledger |
| Last validate result             | (populated on first run)                               | Status.md ledger |
| Open CodeGraph HRDs              | (per consuming project; see project's docs/Issues.md ) | —                |

# Cadence compliance (per § . . )

Per-project cadence audit:

| Project                                  | Last update                                  | Last sync   | Last validate | §11.4.80 compliance (weekly floor) |
|------------------------------------------|----------------------------------------------|-------------|---------------|------------------------------------|
| Herald                                   | (populated on first codegraph_update.sh run) | (populated) | (populated)   | TBD                                |
| (other consuming projects appended here) | —                                            | —           | —             | —                                  |

### Semgrep SAST

| Component                                | Status     | Last Checked |
|------------------------------------------|------------|--------------|
| semgrep installed on PATH                | PASS       | 2026-06-21   |
| Known-vuln detection (eval injection)    | PASS       | 2026-06-21   |
| Registry connectivity                    | PASS       | 2026-06-21   |
| Pre-commit hook (git: staged files scan) | CREATED    | 2026-06-21   |
| Pre-push gate (--error blocks findings)  | CONFIGURED | 2026-06-21   |
| MCP agent integration                    | PENDING    | —            |
| All consuming projects wired             | PENDING    | —            |
